SUPERYACHTS ARE OUR PASSION

Here at Pendennis we care passionately about yachts. Whether we are building, refitting or providing international yacht support we pride ourselves on delivering world-class service. Operating in the 30m-100m market, meeting the specific needs of each of our clients is very important to us, and we work hard to develop partnerships that will be both long lasting and productive. Now with a refit office and workshop located in Palma supporting our main facility in Falmouth, we can offer clients a truly flexible support network during the life of their superyacht.

“The professionalism, attention to detail, quality control and consideration of the Owner were the hallmarks of my time at Pendennis.”
Owner of Hemisphere

The Pendennis family

At Pendennis each yacht we work on has its own persona and individual style – the yacht and its crew become extended members of the Pendennis family. Having built over 30 luxury yachts and conducted major refit, remodelling and restoration works on a further 250, the Pendennis family can be found all over the globe.

The quality of our work stands the test of time, and we see yachts return year after year to take advantage of our highly skilled trades people, knowledge and global network to carry out routine maintenance and surveys to refurbishments and structural alterations.
STATE-OF-THE-ART FACILITIES

General stores and crew storage
This modern 1200m² building houses our general stores, as well as secure crew storage for projects within the yard.

Crew Facilities, Training Centre, Gym and Offices
We pride ourselves on the facilities that we have developed for visiting crews, which are some of the best in the world. Located in a renovated Victorian building, each spacious office comes fully equipped with broadband internet connection, a dedicated crew kitchen and separate washroom area and full use of our on site gym. With a capacity to accommodate several separate crews at any one time, our facility allows crews to settle easily into yard life, mix with other crews and get straight into their project.

Finishing
The 200m² finishing workshop comprises distinct preparation and sanding, spraying and drying areas. All spraying is conducted in a heated, water-backed spray booth to achieve a world-class high quality dust free finish.

Main Hall
This fully insulated space contains three new purpose built construction bays (2x90m and 1x40m) complete with overhead cranage, workshops and project management offices.
Undercover Dry Docks
Opened in the Spring of 2005, this state-of-the-art refit complex was designed to provide the perfect conditions for refitting both sailing and motor yachts. There are two 75m x 24m wide dry docks (or one 150m x 24m), both of which are completely enclosed and equipped with an environmental control system.

Refit Complex
Adjoining the undercover dry docks is a three-storey workshop complex (totalling 1400m²) housing paint, joinery and engineering workshops, as well as refit project management offices.

Slipway and 400 tonne Travel Hoist
An 11m wide slipway and 400 tonne travel hoist provide a number of launching, recovery and alongside options for projects leaving or arriving at the facility.
Since entering the superyacht industry in 1988, we have developed a strong reputation for producing custom yachts that combine technical excellence with both stunning design and performance in the sailing and motor yacht sectors from 30 – 100m.

Over this period we have worked with many of the world’s leading Naval Architects and Yacht Designers including Dubois, Redman Whiteley Dixon, Reymond Langton, Ron Holland Design and Dykstra Naval Architects.

Each of our new build projects has presented the team here with a fresh challenge – whether building a 55m exploration yacht able to cruise the Northern Passage or a beautifully appointed family ocean cruising yacht which can hold her own on the superyacht racing circuit. Our highly skilled trade specialists and support staff use their wealth of knowledge and experience to meet these exacting demands, helping to bring each individual Owner’s dream to life.

“We were impressed with the dedication and efficiency of the Pendennis team, who ensured smooth progress during the Christopher project – resulting in a yacht completed on budget and on time.”

CLIENT EXPERIENCE

Our time as one of the world’s leading superyacht yards has shown us the importance of creating treasured memories for our clients, from concept through to completion and beyond.

Providing a memorable client experience is at the very core of our project philosophy and we offer a discreet, relaxed environment for clients to come and truly enjoy the entire process from start to finish.

From the very outset each project is given a dedicated project team, supported by trade specialists from our 320 strong workforce – providing both clear lines of communication and accountability. Where needed we offer clients access to our technical and interior design teams, who can work alongside the Owner and their team, helping to bring ideas to life and make dreams a reality.

Our commitment to our clients does not finish when a vessel leaves our facility, through our dedicated yacht support service and Mediterranean base in Palma we are able offer the same level of care and attention anywhere in the world.
REFIT, REMODEL & RESTORE – THE COMPLETE SOLUTION

With over 25 years of experience on both motor and sailing yachts of all shapes and sizes there isn’t much that our knowledgeable team hasn’t encountered when it comes to the refitting, remodelling or restoration of a client’s yacht.

Refit

The flexibility of our facilities and in-house specialist teams means that Pendennis is perfectly positioned to provide a one stop solution for clients looking to conduct routine maintenance on their yachts, from a six week short works contract to a six month class focused refit.

Our trade specialists work alongside the Owner’s team to minimise a yacht’s downtime and are experienced at working to controlled deadlines and budgets. In-house services that we are able to offer include technical liaison with classification societies, maintenance on all major engine room, bridge and entertainment equipment, refresh of interior spaces and servicing on deck equipment.
Dona Amélia
71M Motor yacht, refitted 2011
“The facilities and team at Pendennis have been great both times that S.Y Moonbird has visited the yard for refit. It’s reassuring to work with a yard where so many skills are in-house and customer service is key.”

Captain of S.Y Moonbird

Remodel
Extensive experience on projects such as *Elisabeth F, Illusion, A2* and *Adix* has given Pendennis a wealth of knowledge on conducting extensive structural and interior modifications. Breathing new life into vessels has become a hallmark of ours – whether it’s the remodelling and extension of a yacht’s outdoor entertainment spaces or the full restyling of a yacht’s interior to a new Owner’s taste and requirements using our in-house technical designers and class compliance expertise.

Restore
The restoration of classic yachts has a special place in our hearts. Pendennis has conducted several restoration projects over the years, on icons of the industry including *Fair Lady, Adela* and *Shamrock V*, that have received international acclaim. Taking on the challenge of sympathetically restoring any yacht from a bygone age, stripping back years of wear and tear to reveal the original beauty and heritage, is a true privilege for our team.

YACHT SUPPORT

Our presence and strength as one of the world’s leading yacht builders and refitters means that we are perfectly placed to support any superyacht over 30m anywhere in the world.

The Yacht Support team maintains a consistent presence in France, Italy, Spain and the Pacific region all year round visiting marinas, regattas and industry events. This is further complemented by our remote bases in both Palma and Auckland.

The combination of our workforce and intimate knowledge of the inner workings of superyachts enables us to provide solutions to any problems or issues on board any vessel worldwide.

We offer yachts a wide range of services under our Yacht Support umbrella:

Parts and equipment supply
Our experience allows us to discuss your specific requirements and negotiate the best package with suppliers on your behalf and then have parts shipped to any destination in the world at short notice and with the minimum of fuss.

Knowledge supply
We can offer impartial advice on a wide range of technical and maintenance issues involving your superyacht, including technical drawings, manuals and class surveys.

Labour supply
Our highly skilled trades people are available to travel the world as part of our Yacht Support service for small maintenance issues and to provide crew cover.

“Although I am not on a Pendennis yacht, I know I always have the back up from you all should I ever need it. The technical skills and quick response time of Pendennis has been invaluable to maintaining Tugatsu as a world class superyacht.”

Captain of M.Y Tugatsu
PALMA – COMPLETE REFIT COVERAGE

Launched in July 2011, our base in Palma is a keystone in Pendennis’ customer centric approach. Focused on assisting clients with routine maintenance and interim works the facility provides them with a convenient bolt hole in the Mediterranean for short works.

A multi-disciplined project management team from our UK operation head up a team of trade specialists deployed from our UK workforce. The flexible nature of the Pendennis Palma set up means that the mix of trade specialists on site can be adapted to react to the nature and number of live projects at any given point in time. We can also call upon trusted local subcontractors to assist with projects where necessary.

Both Captains and Owners can receive assistance with shoreside operations including administrating the temporary importation of vessels (TPA), accommodation and vehicle hire – making the transition to shoreside as simple as possible.

Pendennis’ global IT portal ‘Atlas’ also allows the team to tap into the wealth of technical knowledge and information held in the UK on all previous projects. Providing further continuity for clients with all of their yacht’s data stored in one central location, the system offers a straightforward solution for the transfer of project data between both sites.
